The website is made with a backend with Wordpress

The website was at 1st going to be only Toosmooth hire company for Entertainment

He then wanted a section added that included a trade section which would have allowed a user to sign up for an account under a payment method there was going to be 3 payment options which give the user more option for the higher account.

With this he wanted them to be able to get there own page and be able to include there form of business. there would have been option that would have included DJs then once for MCs, then one for PA system hire etc.

Each section would be under area of location for the hire.

This is the section i had problems with as it was in fact like a yellow pages for Entertainment but allowing the option for the user to input there company data so the website needed min input and maintenance.

Coding this within the website was where I had issues as I had to make it also work with the wordpress backend database.
