Subject: Re: Parts

Hello, i hope all is well for you. The pictures of the thermostat you have sent me are correct and that of the missing conductors **1.**
KM20.01
2. KM23.01.

You would also be right in understanding that I do request the different prices of the blue beans needed to clean the machine, including the different prices of the glue need to fill the machine, please can you help me with what I require.

Many thanks, Mr. Simon Cordell

Hi Simon

Could you please have a look at these picture and let me know if these are the parts you require.

Hello, hope all is well I have been asked to forward this email to yourself's in regards to parts for a Morgana 150 pur machine that I have recently been trying to fix.

The parts and prices that I request are as follows:-

1. **Thermostat, Solder Tag the markers on the original part are; Termination, 0°C +460°C - 2455rc - 9082 - N47 - 12 L200c.**
2. The different prices of the blue beans needed to clean the machine.
3. The different prices of the glue need to fill the machine.

I also ask if there should be a Semiconductor contained in the machine within the distribution board at the back: code numbers

1. KM20.01

2. KM23.01

If so what is the part number and how much does Morgana supply them for?

Many thanks and kind regards
Mr Simon Cordell
